

Dear Sir/ Madam,

Powder Systems limited assigned Lee Curran on behalf of our company to manage the Hazardous Waste materials generated from Process Trials conducted during the latter half of 2010 at our facility in Speke, Liverpool. As the Project Manager I played a key role in the management of this activity and therefore needed to work closely with the selected Waste Manager.

After the selection process we finally chose Lee who came in on behalf of his company. After several meetings Lee worked out the Hazardous Waste Management Plan for the project with me prior to commencement of the Process Trials.

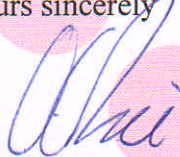

The project lasted three months in total and without Lee's commitment and flexibility to our needs we would not have had such a positive outcome.

We overcame a number of obstacles during the project as the type and concentration of the hazardous waste varied due to trials process. With Lee's proactive response and approach we overcame all issues and were able to continue in a safe and effective manner.

During the Process Trials Lee ensured that all the necessary technical and legislative documentation were in place to satisfy all our duty of care and regulatory requirements.

Upon completion of the project we are more than satisfied with Lee's input and we would have no hesitation in employing Lee's services to manage any hazardous waste generated from any of our future projects.

Yours sincerely

O.C.Price

Project Manager.
